

COMPENG 2SH4 Project – Statement of Contribution

Your Group Number Error-404.

Your Name Rahimeen Ali.

Your Team Member's Name Karthik Pusapati

You must complete this statement of contribution without discussing it with your project partner, i.e., individually. Your statement should be concise (at most one-and-a-half page). It has three parts:

1. Tell us about your own contribution to the development of your COMPENG 2SH4 project. For example, you can tell us about which project iterations (as mentioned in the project manual) and C++ project classes that you worked on and completed. You can provide a concise answer either in paragraph form or through bullet points.
 - a. My partner and I both did iteration 0.
 - b. I finished iteration 1A.
 - c. I did iteration 2B.
 - d. For iteration 3 my partner and I both worked on feature one, and then did feature 2 and 3 separately.
 - i. I did feature 2.

2. Repeat Part 1 above but this time tell us about your project partner's contribution to the development of your COMPENG 2SH4 project.
 - a. My partner and I both did iteration 0.
 - b. My partner finished iteration 1B.
 - c. My partner did iteration 2A.
 - d. For iteration 3 my partner and I both worked on feature one, and then did feature 2 and 3 separately.
 - i. My partner did feature 3.

3. Tell us about your experience in your first collaborated software development through this project – what was working and what wasn't. If you are a one-person team, tell us what you think may work better if you had a second collaborator working with you.
 - a. My first experience with collaborated software development was highly educational and insightful in terms of responsibility. Typically, when working on projects I do not set goals for my self, which can help finishing the project early. However, this time around I was not solely responsible for my self but also for partner. This sense of responsibility motivated me to set goal for both me and my partner as a team.

- b. 1 thing that worked well for us was the fact that although we both were assigned different parts we never hesitated to help each other out, for example, my partner had to help me out for majority of iteration 1A and I helped him debug iteration 2A, this harmony that we had was good to have and did not make me feel solely responsible for both our work.
- c. Another thing that worked out well for us was the fact that we communicated with each other well, we communicated anytime we couldn't meet our personal set deadlines and learned to work around each others' times. My partner was very supportive of me when I had personal issues and could not meet our deadline. This communication helped us give our best to this project.
- d. 1 more thing that worked well for us was the fact that we tested our program a lot and effectively fixed all the bugs we found last minute.
